

## New folding vice platforms in robust design

**Modul-System has introduced two new folding vice platforms.**

**A perfect solution for operators that from time to time need to use a vice, but don't want to invest in a workbench solution.**

**"We know that functionality is extremely important for our customers, and we are therefore constantly working to create new, smart solutions" explains Thomas Johansson, Vice President of Modul-System.**

Functionality combined with robustness is very important when it comes to any kind of equipment in light commercial vehicles. Well-designed solutions make everyday life easier, and save both time and money. "Robust solutions are more or less a requirement when you want your service vehicle to run smoothly every day for a number of years", says Thomas Johansson.

Modul-System has recently introduced two new folding vice platforms, one that is mounted directly on the racking kit, and one that is bolted to the floor. They are both carefully designed to take up as little space as possible in the vehicle cargo, without compromising on strength and durability.

"When the vice platform is not in use it takes up little space, but in the extended position it is extremely robust and strong", explains Thomas Johansson.

Thanks to the ergonomic design with twin gas struts, the platforms are easy to fold up and down.

"For Modul-System, it is important to constantly improve the everyday lives of our customers" says Thomas Johansson.

### *About Modul-System*

*Modul-System develops, manufactures and installs racking systems for service vehicles. The company is represented in 50 countries and has over 45 years of experience in the industry. Modul-System is part of the Lifco group. The head office is located in Mölndal just outside Gothenburg. For more information, please visit [www.modul-system.com](http://www.modul-system.com).*
