

Modul-System launch a new lighting range

Modul-System has developed a new range of exterior lights designed for vans and service vehicles. The new premium LED lighting range includes light bars, warning lights and strobe lights.

“We offer premium quality products, which hold all of the relevant certifications”, explains Thomas Johansson, Vice President of Modul-System.

Modul-System are van conversion specialists who offer turnkey solutions for their customers, taking responsibility for the whole conversion process, delivering custom-made solutions to suit all requirements.

Unlike other vehicle racking manufacturers, Modul-System’s product range includes electrical accessories and lights that have been developed in-house. The focus for Modul-System has been to develop well designed lighting products which are energy-efficient and high-quality.

“Electrics are a huge part of vehicle conversions and one of our main focus areas at the moment. By producing our own products, we can create a high quality product with the confidence to deliver the vehicle to the customer”, says Thomas Johansson, Vice President of Modul-System.

Modul-System has already launched a hugely successful range of interior lights and therefore the expectations for the new exterior light range is very high.

The new lights are available in different sizes to suit all vehicles and will work on both 12V and 24V systems. All lights are E-marked and are confidently offered with a two-year warranty.
