

MODUL-SYSTEM

Racking proposals

Introduction to Modul-System Limited

Modul-System Limited is a market leader for modular racking systems. The built-in versatility of a modular system means that you can configure a racking solution to meet your own individual requirement, whilst keeping costs down.

For nearly 40 years, we have worked closely with major manufacturers of light commercial vehicles and customers alike. This has helped us find the best solution to suit both the vehicle and the trade. In addition, it has enabled us to continually create new, innovative products.

We were the first in our industry to introduce high strength steel (HSS) and later ultra-high strength steel (UHSS), into our products. By using this high-tech material, we have been able to reduce the weight of our products even further, while the solutions remain extremely robust and collision-safe.

SERVICE CENTRE PARTNER NETWORK

Modul-System has an established and broad network of Service Centres across the UK to directly support you with your conversion requirements. We have approved installation partners in Scotland, Northern Ireland, Ireland and throughout England.

Many of our partners provide additional services to compliment your conversion requirements, including: lighting, power (110v & 240v), heating, ventilation, professional coatings and security providing you a complete solution.

If you can't find an installation partner nearby, please contact our UK Sales Team and we will be happy to assist you: sales@modul-system.co.uk

WHY CHOOSE MODUL-SYSTEM

Save Time. An organised vehicle saves an operator significant time and offers peace of mind - every item has its dedicated place.

Stay Flexible. A fully modular solution. One you can add to easily in the future. As your business grows, your van racking can adapt with you.

Greener. We operate to ISO:14001 Environmental Standards and are fully committed to reducing our Carbon footprint.

Quick deliveries. Large national & international stock holding ensures we can offer customers a fast and flexible delivery options.

Total coordination. We take responsibility for the whole vehicle conversion process, which gives you the opportunity to focus on your core business.

Customised solutions. Our module-based racking systems can be completely customised to meet your needs, using products off the shelf.

Lightweight. Our lightweight van conversions offer reduced CO₂ emissions & less fuel. Electric Van compatibility for extended range.

High quality. We rigorously test our products for durability and replicate the complete product life cycle and give a 3-year warranty on our installation.

No drilling required. When installed with our Modul-Floor. This eliminates the risk of corrosion and protects the vehicle's residual value.

Large Fleets. Our customers include utility companies, local authorities, distribution companies, construction and rail industries.

SME's. We fully convert small and medium sized fleets for housing associations, plant hire, facilities management, forklifts and many more.

Tradesperson. We work with a wide range of sole traders from electricians, builders, plumbers and carpenters to locksmiths, farriers and many more.

A safe choice

Our racking solutions are produced in our own factory in Sweden. The products are produced using some of the most advanced production technologies in Europe and the manufacturing processes meet ISO 9001 certification and also comply with the European TÜV standard.

Safety and quality are of paramount importance to Modul-System. We invest a lot of time and energy into the development of innovative, new products and then carry out stringent tests to make sure that the end product is of the highest quality possible. This includes laboratory, load capacity and vibration tests - simulating real use (3D) along with durability tests to replicate the complete product life cycle, ensuring that the products are designed to cope with the harsh environment that the vehicle and conversion can sometimes be subjected to.

Comprehensive crash testing is carried out at specialist research facilities as part of Modul-System's commitment to safety. The tests are known as ECE R17-07 with a 20g pulse for 30ms. This test is identical in all major respects to the DIN 75410-2 test, which is the equivalent to a crash at a speed of approximately 50 km/h.
